SPRINGS

The Doc 250 has passed 'draft' NAWAC (National Animal Welfare Advisory Committee)* guidelines as a humane kill trap for ferrets, stoats, rats and hedgehogs. These setting instructions must be followed to meet these guidelines.

Step one

Locating and bolting the trap in the tunnel:

- | Use the galvanized mild steel bolts provided
- | Traps should be fixed with the treadle 5mm (approximately) from the side of the box and the baffle.**

Top of trigger arm

** 5mm

Setting loop

Treadle and hole in baffle must be aligned

Treadle

Sear

Bait (egg or meat) on wood or nail pedestal

Step two

Setting the trap:

- | Pull carefully on the wire setting loop with your hand. Continue past the top of the trigger arm, allowing the trigger arm to drop onto the treadle.
- | SLOWLY release pressure, allowing the bottom of the trigger arm to gently ride up treadle and catch on the sear.

Doc 250

Department of Conservation
Te Papa Atawhai

These Department of Conservation 'current best practice' tunnel designs must be used with DOC 250 traps. These tunnels are designed to exclude non target species, guide target species and provide public safety.

Single set tunnel design.

In areas where weka are present, the tunnel length is 535mm, the distance from the end mesh to the internal mesh increases from 130mm to 265mm.

Materials

- | All timber H4 treated radiata or similar.
- | Ends and baffles 20mm galvanised weld mesh.
- | 75mm galvanised a/gooved decking nails.

Drawings, Phil Waddington
